climate change. There has been little English scholarship on the legal regime for climate change in China. This volume addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation. The authors are not only interested in China's laws on paper; rather, the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws, laws

in preparation, the changing standing of law relative to policy, and the further reforms that will be necessary in response to the 2015 Paris Agreement on Climate Change. This comprehensive and critical account of the Chinese legal system's response to the pressures of climate change will be an important resource for scholars of international law, environmental law, and Chinese law. *Litigating the Climate Emergency* Aug 06 2020 As the climate emergency intensifies, rights-based climate cases - litigation that is based on human rights law - are Free [festivalfinder.com](https://www.festivalfinder.com) on December 2, 2022 Pdf File Free

life, Earth's ecosystem, global security, and economic well-being. The global community increasingly understands that business as usual is no longer an option. Debate about states' legal obligations to reduce their greenhouse gas emissions is still in its infancy. This seriously hinders progress through the political process or the courts. A group of legal experts has sought to fill this gap by drafting the Oslo Principles on Global Climate Change Obligations. The Principles identify states' reduction obligations and articulate a series of related obligations aimed

agreed goals with tangible national commitments to mitigate climate change. Can this pursuit of globally agreed goals at a local level be transposed and lead a similar trend for biodiversity governance? This edited collection gives readers an overview of the shape and reach of biodiversity litigation, drawing on specific case studies from countries such as Brazil, China, India and Canada. It considers two questions: Firstly, what is the influence of international biodiversity law on biodiversity litigation? Secondly, what are the trends of biodiversity

litigation? Leading experts discuss these questions from the perspective of developing, developed and mega bio-diverse countries, promoting the concept of biodiversity litigation as a common notion of environmental law, and arguing for more creative legal thinking when dealing with and analysing biodiversity-related disputes.

May 27 2022 Courts have emerged as a crucial battleground in efforts to regulate climate change. Over the past several years, tribunals at every level of government around the world have seen claims regarding greenhouse gas emissions and impacts. These cases rely on diverse legal theories, but all focus on government regulation of climate change or the actions of major corporate emitters. This book explores climate actions in state and national

courts, as well as international tribunals, in order to explain their regulatory significance. It demonstrates the role that these cases play in broader debates over climate policy and argues that they serve as an important force in pressuring governments and emitters to address this crucial problem. As law firms and public interest organizations increasingly develop climate practice areas, the book serves as a crucial resource for practitioners, policymakers and academics.

International law, including treaty regimes, institutions, and customary international law, needs to address the myriad challenges and consequences of climate change, including variations in the weather patterns, sea level rise, and the resulting migration of peoples. ... This book addresses the

major legal dimensions of the problems caused by climate change: including questions ranging from how to implement international legal frameworks at the national level, to how carbon trading systems can be used as a means of reducing the costs of meeting emission reduction targets."-- Book jacket.

society, and the notion that climate change is at a tipping point with urgent measures needed in the next decade. Against this background, civil society is turning its attention to the courts as a means to directly influence climate action, partly because of the global scepticism towards the progress of global climate action, despite the ongoing implementation of the Paris Agreement.

Focusing on the individual, broadly representing civil society, the book offers fresh perspectives on climate change litigation. While most of the literature on climate change

litigation examines the same specific jurisdictions, mostly common law countries (US and Australia in particular), this book also considers specific countries in Asia, Africa and Latin America with little or no climate change litigation. It explores the reasons for the lack of litigation and discusses what measures should or could be taken to change this situation and push forward climate action. Unlike other literature on the subject, this book analyses climate change litigation using a scenario-based methodology. Environmental Loss and Damage in a Comparative Law

Perspective Oct 27 2019 "This book analyzes the regulation of environmental loss and damage. It does so from a comparative and interdisciplinary perspective, examining both public and private law aspects. It delves into conceptual and specific legal issues concerning liability, compensation and

restoration of damage in different sectors and jurisdictions, as well as taking into account the contributions of economic analysis in this field of regulation. Specific attention has been devoted to the role that liability and insurance may play in terms of mitigation and adaptation to climate change, as well as the prevention of damage from natural hazards. The scope of analysis encompasses

national as well as supranational and international regimes. In particular, there are two interrelated and very promising developments in the evolving understandings in this field that merit special focus: possible legal transplants and "cross-fertilization" between legal systems, on the one hand; and the current dialectic between global and local law in the environmental field, on the other."-- Page 4 de la couverture.
