The Science of Education Oct 23 2019 *The Science of Education: Back to School* by the Editors of Scientific American Updated Edition. This eBook has been updated to include content from two special reports on education. Scientific American's popular "Learning in the Digital Age," is included almost in its entirety as the new Section 7 and analyzes the positive and negative effects of the digital revolution on education. In addition, two new articles from Scientific American Mind's report "The Science of Better Learning" are included in Section 2: "For the Love of Math" and "The Science of Handwriting." The first examines the benefits of guided-discovery programs like JUMP in teaching math, and the second discusses research that shows forming words by hand rather than typing may lead to longer-term memories. These and the rest of the articles in this collection explore how learning is a scientific process and offer the latest theories of education. Section 1, "The Lesson Plan," begins with how children learn and includes an eye-opening piece by Scientific American Editor Ingrid Wickelgren on how honing certain psychological skills not only enhances learning but also helps kids fight frustration and ward off stress. Other sections cover teaching the three Rs, the unique requirements of gifted children, controversies of class size, roles of parents and teachers and the imperative to improve science teaching. Individual articles delve into specific issues such as how a focus on intellect over effort can negatively affect potential, the role that errors play in retention, how physical activity boosts academic achievement, the effects of parents versus peer groups on behavior and much more. In this anthology, Scientific American has gathered some of its best reporting on the challenges, successes and the execution of a scientific approach to education. Together, they help construct a path for success for the next generation.

A Companion to American Poetry Feb 07 2021 "In his 1919 essay, "Tradition and the Individual Talent," T.S. Eliot observed that the creation of a new work of art necessarily changes everything that went before it: "The existing monuments form an ideal order among themselves, which is modified by the introduction of the new (the really new) work of art among them" (1920, para. 4). In the case of poetry, new work changes the way we look at Emily Dickinson's fascicles or modernist images, for example, or indeed what we consider "American" poetry. New work can broaden contexts and point to new areas of influence. Like works of art, critical paradigms can also reorganize the field of poetics, transforming what scholars value or understand about poems. The New Criticism, for instance, raised the profile of the lyric poem in the early twentieth century, an elevation that was later contested, first by the New Historicism, which restored the elements of identity and context, and privileged narrative over lyric in the late 20th century, and more recently by the "new lyric studies." The twenty-first century has also seen a growing interest in documentary and archival poetry, a further remove from New Critical impersonality. As a result of changes in both poetic practice and new critical paradigms, often in a reciprocal relation with one another, the study of poetry has evolved at a rapid rate. This volume was conceived and written during a period of accelerating global instability, with the reemergence of authoritarian political regimes, the increasingly obvious effects of climate change, and, in the final years of writing and editing, the COVID-19 pandemic. These challenges highlight the dynamism between present concerns and the ways in which the past helps us understand those concerns. Not only is the past unstable, but it changes according to the questions we ask of it. In the development of the Companion to American Poetry we have tried to broaden our critical map so as to address the fact that our American pasts often entertained very different ideas of the poet and of poetry's place and purpose. We solicited essays that both took those historical concepts on their own terms but also, crucially, reconceptualized the past in dialogue with the present. Not only is the past unstable, but it changes according to the questions we ask of it. In this volume, we sought to pose new questions that respected long-standing concerns of American poetry and its critics but also recast those questions according to our present lights. How, for instance, has the inescapable experience of death and dying been transformed through the decades by the poetic imagination? How has American poetry staged the struggles over language and nation in the wake of U.S. settler colonialism? How have queer and trans voices used poetry to articulate identities that have been otherwise repressed in the U.S.? Where do we see poetry engaging "nature" as a transcendent concept and the anthropocene as a material activity of planetary destruction? How does the very term "American poetry" become redefined when read through the forces of globalization? Questions such as these express critical and poetic continuities--and those are traditionally at the heart of a volume such as this one--but also demonstrate important discontinuities. These include poetry's relationship to other genres and other fields, the way conceptions of the poem itself have changed, and the way poetry responds to contemporary events and trends"--

Studies in the History of the English Language II May 30 2020 Studies in the History of the English Language II: Unfolding Conversations contains selected papers from the SHEL-2 conference held at the University of Washington in Spring 2002. In the volume, scholars from North America and Europe address a broad spectrum of research topics in historical English linguistics, including new theories/methods such as Optimality Theory and corpus linguistics, and traditional fields such as phonology and syntax. In each of the four sections - Philology and linguistics; Corpus- and text-based studies; Constraint-based studies; Dialectology - a key article provides the focal point for a discussion between leading scholars, who respond directly to each other's arguments within the volume. In Section 1, Donka Minkova and Lesley Milroy explore the possibilities of historical sociolinguistics as part of a discussion of the distinction between philology and linguistics. In Section 2, Susan M. Fitzmaurice and Erik Smitterberg provide new research findings on the history and usage of progressive constructions. In Section 3, Geoffrey Russom and Robert D. Fulk reanalyze the development of Middle English alliterative meter. In Section 4, Michael Montgomery, Connie Eble, and Guy Bailey interpret new historical evidence of the pen/pin merger in Southern American English. The remaining articles address equally salient problems and possibilities within the field of historical English linguistics. The volume spans topics and time periods from Proto-Germanic sound change to twenty-first century dialect variation, and methodologies from painstaking philological work with written texts to high-speed data gathering in computerized corpora. As a whole, the volume captures an ongoing conversation at the heart of historical English linguistics: the question of evidence and historical reconstruction.
