Physical Medicine and Rehabilitation Oral Board Review Jul 26 2019 Revised second edition of the singular review book devoted to helping candidates prepare for and succeed on the ABPMR Part II certification examination. This interactive workbook has been updated and expanded to reflect changes to the oral exam format and introduce topics of increasing importance. With new chapters on complex medical rehabilitation, cancer rehabilitation, pain medicine, spinal disorders, and sports medicine and a total of 86 cases across all practice areas on the board outline, this is the study tool that positions you to pass Part II the first time out. The book uses a question and response format to actively engage readers for individual or group study. Chapter vignettes set up common psychiatric problems and are structured to walk readers through the types of questions encountered in daily practice. This unique conversational method simulates a discussion between examiner and examinee, presenting a focused exchange that unfolds organically and leads respondents to the most appropriate answers. Case questions are organized by the five domains measured on the oral boards: data acquisition, problem solving, patient management, systems-based practice, and interpersonal and communication skills. Designed to build a systematic approach to clinical questions applicable to any case so you can think on your feet, understand the goal of the prompts, and respond effectively both on the boards and at the patient's bedside. Key Features: Interactive format of question-and-answer vignettes helps to foster skills and confidence necessary for success on the PM&R oral board exam (Part II) More than 4x the number of cases than any other review book on the market Revised and updated to reflect changes to the exam format and introduce emerging topics Experienced chapter authors from many of the leading national programs

Surgery Apr 26 2022 Surgery: A Case Based Clinical Review provides the reader with a comprehensive understanding of surgical diseases in one easy to use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are designed to provide the reader with the classic findings on history and physical examination. The case presentation is followed by a series of short questions and answers, designed to provide further understanding of the important aspects of the history, physical examination, differential diagnosis, diagnostic work-up and management, as well as questions that may arise on surgical rounds. Key figures and tables visually reinforce the important elements of the disease process. A brief algorithmic flow chart is provided so the reader can quickly understand the optimal management approach. Two additional special sections further strengthen the student's comprehension. The first section covers areas of controversy in the diagnosis or management of each disease, and another section discusses pitfalls to avoid, where the inexperienced clinician might get in trouble. The text concludes with a series of multiple choice questions in a surgery shelf/USMLE format with robust explanations. Surgery: A Case Based Clinical Review is based on 20 years of Socratic medical student teaching by a nine-time Golden Apple teaching awardee from the UCLA School of Medicine and will be of great utility for medical students when they rotate on surgery, interns, physician assistant students, nursing students and nurse practitioner students.

Questions and Answers in Neuro-ophthalmology Oct 21 2021 The book presents the most common problems seen in neuro-ophthalmology in a case-based learning format that provides rapid access and is easy to read. The user friendly format guides and stimulates the reader to identify the distinctive symptoms in the main complaint and history, to define the differentiating signs on neuro-ophthalmic exam; and to describe the key laboratory or neuroimaging in specific entities. It also challenges the reader to ask additional questions of themselves and others by providing an initial set of questions and answers on specific neuro-ophthalmic topics. The questions chosen are meant to simulate 'real world' questions in the clinic: the answers given serve to provide both the rationale for the correct answer and the explanations or reasons for the incorrect but plausible answers that might distract or mislead a clinician in specific neuro-ophthalmic cases.
