Geographically and thematically, they range from Alaska to New Jersey, describing, for example, the arrival of telephones in a small village near the Arctic Circle and the arrival of wild bears in considerable numbers in New Jersey, swarming in from the Poconos in search of a better life. Parry's Valuation and Investment Tables May 06 2020 First published in 1913, Richard Parry's Valuation and Investment Tables has since become an essential tool for students and professionals in the study and practice of valuation and appraisal. The book provides a comprehensive set of some 30 different valuation and investment tables in one volume. In practice today, calculations are required for a variety of purposes which often justify more than one approach. With this in mind, Internal Rates of Return tables have been retained in a modified form. Using these tables, both growth and non-growth scenarios can be analysed for a more detailed appraisal of specific freehold property investments and to provide a basis for more in-depth investment advice. The Life Tables have been removed and replaced with a guide to calculating life interests from up to date census data. Although the tables will be used mainly by students and practising surveyors, they will also be useful to accountants and others concerned with various types of investment and financial calculations. That the book has reached its centenary year and thirteenth edition is a testament to its acclaim by the valuation and property professions in an era of calculators, smartphones and sophisticated spread sheet software and furthermore a tribute to the historical importance of Parry's original vision and continued legacy. In celebration of this milestone year there will be a limited edition leather slip cased version of the book available.

How to Invest in Structured Products Apr 16 2021 This book is essential in understanding, investing and risk managing the holy grail of investments - structured products. The book begins by introducing structured products by way of a basic guide so that readers will be able to understand a payoff graphic, read a termsheet or assess a payoff formula, before moving on to the key asset classes and their peculiarities. Readers will then move on to the more advanced subjects such as structured products construction and behaviour during their lifetime. It also explains how to avoid important pitfalls in products across all asset classes, pitfalls that have led to huge losses over recent years, including detailed coverage of counterparty risk, the fall of Lehman Brothers and other key aspects of the financial crisis related to structured products. The second part of the book presents an original approach to implementing structured products in a portfolio. Key features include: A comprehensive list of factors an investor needs to take into consideration before investing. This makes it a great help to any buyer of structured products; Unbiased advice on product investments across several asset classes: equities, fixed income, foreign exchange and commodities; Guidance on how to implement structured products in a portfolio context; A comprehensive questionnaire that will help investors to define their own investment preferences, allowing for a greater precision when facing investment decisions; An original approach determining the typical distribution of returns for major product types, essential for product classification and optimal portfolio implementation purposes; Written in a fresh, clear and understandable style, with many figures illustrating the products and very little mathematics. This book will enable you to better comprehend the use of structured products in everyday banking, quickly analyzing a product, assessing which of your clients it suits, and recognizing its major pitfalls. You will be able to see the added value versus the cost of a product and if the payoff is compatible with the market expectations.
