Greenhouse Gas Control Technologies Dec 15 2020 The control of greenhouse gas emissions continues to be a major global problem. It is inter-disciplinary, both in substance and approach, and covers technical, political and economic issues involving governments, industry and the scientific community. These proceedings contain 220 papers presented at the 5th International Conference on Greenhouse Gas Control Technologies (GHGT-5) held in August 2000 at Cairns, Queensland, Australia. The papers cover the capture of carbon dioxide, geological storage of carbon dioxide, ocean storage of carbon dioxide, storage of carbon dioxide with enhanced hydrocarbon recovery, utilisation of carbon dioxide, other greenhouse gases, fuel cells, alternative energy carriers, energy efficiency, life cycle assessments and energy modelling, economics, international and national policy, trading and accounting policy, social and community issues, and reducing emission from industry and power generation.

**Survey Design and Technical Documentation Supporting the 2021 OECD Survey on Drivers of Trust in Government Institutions** Jun 20 2021 The inaugural OECD Survey on Drivers of Trust in Public Institutions carried out in 2021 ("Trust Survey") is a novel measurement tool supporting OECD governments in reinforcing democratic processes, improving governance outcomes, and, correspondingly, strengthening people's trust in their democratic government. This paper provides the technical details of the surveying process for the inaugural OECD Trust Survey, including its coverage and sample design. The paper also reviews the methodological aspects of the survey to provide an account of the progress made in measuring trust in public institutions cross-country, with respect to previous projects and recommendations included in the OECD Guidelines for Measuring Trust. Finally, it proposes the continuation of the survey in the future, highlights potential areas for improvement in cross-country comparability and for continued cooperation with National Statistical Offices.

**Inside OrCAD** Sep 11 2020 Inside OrCAD goes beyond the reference guide supplied by OrCAD. It contains an overview and introduction to modern schematic drafting, with exercises intended to help the reader master the use of OrCAD via a 'hands-on' learning experience - information that has been de-emphasized in the manuals for recent OrCAD versions. This introduction to OrCAD is designed to give easy access to practical information. The command reference is a complete listing and explanation of the OrCAD commands and functions. A series of appendices provide important tips and techniques and information about linking OrCAD to other Computer Aided Design and Computer Aided Engineering tools used in the electronics design process.

The enclosed disk contains a parts library for the tutorial exercises and several useful utilities, making this book a valuable tool for the design engineer or engineering student. Chris Schroeder is the Technical Director, Electronics, For Crane Technologies Group, Inc., Daytona Beach, Florida, a leading automotive aftermarket and original equipment supplier. He has 19 years of engineering, marketing, and management experience in the electronics industry and has a broad, yet in-depth technical knowledge of both design and manufacturing. His specialized areas of design expertise include: embedded controls using RISC microcontroller technology, assembly language programming, magnetic design for switching power supplies and ignition coils, and printed circuit board design, including the use of surface mount technology. Provides a detailed tutorial. Contains tips and techniques for design engineers. Includes a library and utilities disc.

Optimizing Widely Reported Hospital Quality and Safety Grades Oct 05 2022 This practical, engaging book provides concise, real life-tested guidance to healthcare teams concerned with widely reported and incentivized hospital quality and safety metrics, offering both a conceptual approach and specific advice and frameworks for reviewing quality and safety numerator events, from the perspective and experience of clinicians and administrators working within the Ochsner Health System. The text opens with the rationale for closely managing widely (including publicly) reported hospital patient quality and safety measures. Attention is given to the financial implications of quality performance, with respect to both penalties and payment incentives used by payer organizations. It then reviews the major public ratings and their relevant methodologies, including CMS, AHRQ and NSHN. In addition, it addresses ratings by proprietary organizations that have a large member clientele, such as Vizient, USNews, Leapfrog, Healthgrades, CareChex and others. Each metric - for example, the AHRQ Patient Safety Indicators (PSIs), and other metrics such as readmission rate, risk adjusted complications, hospital-acquired conditions and mortality - is addressed in a stand-alone chapter. For each, the importance, approach to review, opportunity for optimization, and engagement of healthcare staff are reviewed and discussed. Overall, this book forefronts the benefits of a collaborative approach within a health system. The concurrent review process, multidisciplinary collaboration among quality improvement, clinical documentation, coding and medical staff personnel are all emphasized. Also described in detail is the approach to and specific opportunities for medical staff education and engagement. Additional key topics include Engagement of the Medical Staff and House Staff (i.e., residents and other trainees), Futile Care, Surgical Quality Improvement (NSQIP), Nursing Provider Partnership, and Translation of Data Review to Successful Performance Improvement. Specialty chapters on pediatric, neurologic and transplant quality metrics are also included.

**Computer Architecture** Oct 13 2020 This book constitutes the thoroughly refereed post-conference proceedings of the workshops held at the 37th International Symposium on Computer Architecture, ISCA 2010, in Saint-Malo, France, in June 2010. The 28 revised full papers presented were carefully reviewed and selected from the lectures given at 5 of these workshops. The papers address topics ranging from novel memory architectures to emerging application design and performance analysis and encompassed the following workshops: A4MMC, applications for multi- and many-cores; AMAS-BT, 3rd workshop on architectural and micro-architectural support for binary translation; EAMA, the 3rd Workshop for emerging applications and many-core architectures; WEED, 2nd Workshop on energy efficient design, as well as WIOSCA, the annual workshop on the interaction between operating systems and computer architecture.

*Modelling Long-term Scenarios for Low Carbon Societies* Oct 01 2019 With the ever-increasing impacts of climate change, it is now clear that global society will have to restructure its energy systems in order to decrease carbon emissions. The scenarios under which this transition to low-carbon societies (LCS) could occur would have complex economic, technological, behavioural and policy implications. This volume, a supplement to the Climate Policy journal, considers these implications by examining different low-carbon scenarios for different countries, modelled at different scales and typologies. Two overview chapters, co-written by international experts, set the context of scenario development and quantification of LCS, and summarize the findings on the economic implications, societal responses, technological developments and required policy measures to

enable LCS across a range of countries. Further chapters detail the modelling of various scenarios and outline the model methodology, detail the economic and technological consequences of transitions to LCS, and comment on the strengths and weaknesses of specific policies.

Scientific Drivers for ESO Future VLT/VLTI Instrumentation Apr 30 2022 This is the start of a long process to ultimately operate new advanced capabilities at Paranal that can keep up with the evergrowing need for larger and more complex astrophysical data sets. A modern instrument represents a very significant investment in cash, human resources and time. Such a meeting gives us a precious yardstick to evaluate the competitiveness of 1st-generation instruments and associated current and forthcoming proposals for 1st-generation upgrades. This is also crucial to orient the large research and development effort that will provide the very foundation on which 2nd-generation VLT instrumentation can be built. Finally, it represents a significant step towards defining the hopes and goals for the future Extremely Large Telescope to come. The first outcome of this meeting, already in progress, is outlined in the epilogue.
