Enforcement of Maritime Claims Feb 12 2021 The fourth edition consists of consideration of all aspects of the jurisdiction of English courts and arbitrators over maritime claims, applicable law, judgments, remedies and security interests, including the continuing critical impact of membership of the European Union. The comprehensive updating encompasses legislative, convention and judicial developments since the publication of the last

edition in 2000 - in particular the replacement of the amended Brussels Jurisdiction and Judgments Convention 1968 by Council Regulation 44/2001 and its effect on other maritime convention jurisdiction provisions, relevant Civil Procedure Rules and judicial interpretation of both.

Cyber Warfare and Cyber Terrorism Jul 20 2021 "This book reviews problems, issues, and presentations of the newest research in the field of cyberwarfare and cyberterrorism. While enormous efficiencies have been gained as a result of computers and telecommunications technologies, use of these systems and networks translates into a major concentration of information resources, creating a vulnerability to a host of attacks and exploitations"--Provided by publisher.

Response of Lactating Buffaloes to Bypass Protein and Bypass Fat Feb 01 2020 The on-farm trial was conducted to know the effect of feeding bypass protein and bypass fat supplement to buffaloes allotted to three dietary treatments at Dahod district of Gujarat. The supplementation of bypass protein in combination with bypass fat (T3) to buffaloes resulted in higher % of total solids and fat in the milk. The daily yield of whole milk and 6% FCM was higher in Bypass protein (T2) and T3 as compared to Control (T1). The efficiency of conversion of DM and TDN was superior in T3. The service period, services required per conception and body weight loss were significantly lower in T2 and T3 as compared to T1 group. The daily feed cost (Rs.) was significantly higher in T3 group. The daily realizable receipt from sale of milk was the highest in T3 followed by T2 and T1 group. The return over feed cost (Rs./day) was significantly higher in supplemented groups compared to control. However, the net saving (Rs./head/150 days) was 7179.23 and 6256.03 in T3 and T2 groups, respectively, over and above the buffaloes reared on farm feeding schedule, on account of higher return over feed cost, reduction in service period and lowered cost of Artificial Insemination.

Intelligent Agents for Telecommunications Applications Jul 28 2019 Intelligent agent and distributed AI (DAI) approaches attach specific conditions to cooperative exchanges between intelligent systems, that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals, coordinate their actions, share knowledge, and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse-grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this: convergence of traditional telephony and data network worlds, blurring of boundaries between public and private networks, complementary evolution of wireline, wireless, and cable network infrastructures, the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance,

openness, security management and other integrated management, and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

Telecommunications Demand in Theory and Practice Aug 28 2019 Telecommunications Demand in Theory and Practice, which builds upon the author's seminal 1980 book, Telecommunications Demand: A Review and Critique, provides comprehensive analyses of the determinants and structure of telecommunications demands in the United States and Canada. Theory and empirical application receive equal emphasis with a heavy focus on the developments and econometric research since the divestiture of AT&T in 1984. For the first time, a detailed theoretical analysis of business telecommunications demand on subscriber and usage consumption externalities is presented. Telecommunications Demand in Theory and Practice is without peer in the documentation and analysis of price elasticities of demand for telecommunications services. This new book also includes a comprehensive bibliography with over 500 entries related to telecommunications demand and pricing. Telecommunications Demand will appeal to both academic and consulting economists, telecommunications industry analysts and regulators, and to teachers of courses in applied econometrics and regulated industries.

Federal Program Evaluations Oct 23 2021 Contains an inventory of evaluation reports produced by and for selected Federal agencies, including GAO evaluation reports that relate to the programs of those agencies.

The Practice of Coronary Artery Bypass Surgery Feb 24 2022 Few advances in cardiovascular medicine have so captured the interest of physicians and the public alike as has coronary artery bypass surgery. Cardiologists who lived through the era of false hopes and frustrations of previous "operations" for coronary artery disease can fully appreciate what this major advance offers to their patients. The number of papers on this topic presented at national meetings attest to its popularity, but also make it increasingly difficult for anyone to assimilate all the data. Practitioners who must consider coronary artery bypass surgery for their patients may thus have difficulty in coming to some rational decision regarding the indications for the operation and its consequences. Depending on the "authority" that one reads, there is still some controversy as to which patients are candidates for coronary artery surgery. This monograph on the practice of coronary artery bypass surgery, therefore, comes as a welcome boon to cardiologists, surgeons, internists, and general practitioners who must consider referring their patients for such surgery. It presents a balanced and reasonable picture of the overall subject, in addition to containing important information on such topics as operative technique and economic impact. Dr. Miller has done an outstanding job in bringing together in one text the important considerations related to the evaluation of patients, the natural history of coronary artery disease and the benefits and problems associated with bypass surgery.

Quality of Service - IWQoS 2005 Jan 14 2021 This book constitutes the refereed proceedings of the 13th International Workshop on Quality of Service, IWQoS 2005, held in Passau, Germany in June 2005. The 23 revised full papers and 17 revised short papers presented were carefully reviewed and selected from more than 120 submissions. They are organized in topical sections on quality of service in overlay networks, wireless environments, large scale systems, mobile systems, and wireless and wired networks. Aspects of user experience and the impact on current and future techniques are discussed as well.

Applications and Markets for Cooperating Objects Mar 04 2020 This book provides an overview and an insight in cooperative objects and defines the classification of topics into the different areas. A significant number of researchers and industrial partners were contacted in order to prepare the roadmap. The book presents of the main results provided by the corresponding European project "CONET".

U.S. Industrial Outlook Dec 25 2021 Presents industry reviews including a section of "trends and forecasts," complete with tables and graphs for industry analysis.

Walking the Talk May 18 2021 Almost half a century ago, policy leaders issued the Declaration of Alma Ata and embraced the promise of health for all through primary health care (PHC). That vision has inspired generations. Countries throughout the world—rich and poor—have struggled to build health systems anchored in strong PHC where they were needed most. The world has waited long enough for high-performing PHC to become more than an aspiration; it is now time to deliver. The COVID-19 (Coronavirus) pandemic has facilitated the reckoning for that shared failure—but it has also created a once-in-a-generation opportunity for transformational health system changes. The pandemic has shown policy makers and ordinary citizens why health systems matter and what happens when they fail. Bold reforms now can prepare health systems for future crises and bring goals such as universal health coverage within reach. PHC holds the key to these transformations. To fulfill that promise, however, the walk has to finally match the talk. *Walking the Talk: Reimagining Primary Health Care after COVID-19* outlines how to get there. It charts an agenda to reimaged, fit-for-purpose PHC. It asks three questions about health systems reform built around PHC: Why? What? How? The characteristics of high-performing PHC are precisely those that are most critical for managing the pressures coming to bear on health systems in the post-COVID world. The challenges include future outbreaks and other emergent threats, as well as long-term structural trends that are reshaping the environments in which systems operate in noncrisis times. *Walking the Talk* highlights three sets of megatrends that will increasingly affect health systems in the coming decades:

- Demographic and epidemiological shifts
- Changes in technology
- Citizens' evolving expectations for health care.

Reimagined PHC systems will be equipped through optimized system design, financing, and delivery to ensure high-quality services, care to address patients' needs, fairness and accountability, and resilient systems.

Scalability of Networks and Services Dec 13 2020 This volume of the Lecture Notes in Computer Science series contains the papers accepted for

presentation at the Third International Conference on Autonomous - frastructure, Management and Security (AIMS 2009). The conference took place in Enschede, The Netherlands, hosted by the University of Twente. AIMS 2009 was - ganized and supported by the EC IST-EMANICS Network of Excellence (#26854) and co-sponsored by IFIP WG 6.6 and the Strategic Research Orientation of the University of Twente on Dependable Systems and Networks (DSN). AIMS 2009 constituted the Third edition of a single-track and standalone c- ference on management and security aspects of distributed and autonomous systems, which took place initially in Oslo, Norway in June 2007, followed by AIMS 2008 in Bremen, Germany. The theme of the AIMS 2009 conference was "Scalability of Networks and S- vices," focusing on how scalable networked systems can be monitored, managed, and protected in an ef cient and autonomous way. The research papers that have been - lected for publication in the present proceedings have approached this theme from d- ferent perspectives, covering topics such as network resource management, overlays andpeer-to-peernetworks,networkcon gurationandoptimization,andmonitoringand visualization.
