**Supporting Research Writing** Jan 04 2020 Supporting Research Writing explores the range of services designed to facilitate academic writing and publication in English by non-native English-speaking (NNES) authors. It analyses the realities of offering services such as education, translation, editing and writing, and then considers the challenges and benefits that result when these boundaries are consciously blurred. It thus provides an opportunity for readers to reflect on their professional roles and the services that will best serve their clients' needs. A recurring theme is, therefore, the interaction between language professional and client-author. The book offers insights into the opportunities and challenges presented by considering ourselves first and foremost as writing support professionals, differing in our primary approach (through teaching, translating, editing, writing, or a combination of those) but with a common goal. This view has major consequences for the training of professionals who support English-language publication by NNES academics and scientists. Supporting Research Writing will therefore be a stimulus to professional development for those who support English-language publication in real-life contexts and an important resource for those entering the profession. Takes a holistic approach to writing support and reveals how it is best conceived as a spectrum of overlapping and interrelated professional activities Stresses the importance of understanding the real-world needs of authors in their quest to publish Provides insights into the approaches used by experienced practitioners across Europe

*Politics and the English Language* Feb 26 2022 George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature - his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In *Politics and the English Language*, the second in the Orwell's Essays series, Orwell takes aim at the language used in politics, which, he says, 'is designed to make lies sound truthful and murder respectable, and to give an appearance of solidity to pure wind'. In an age where the language used in politics is constantly under the microscope, Orwell's *Politics and the English Language* is just as relevant today, and gives the reader a vital understanding of the tactics at play. 'A writer who can - and must - be rediscovered with every age.' — Irish Times

**Writing a Biomedical Research Paper** Dec 03 2019 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible. Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training. It is as if we have been put to sea without a compass. Our collective failure to achieve widespread literacy in our own language - Biomedical Language - seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition. It is also a significant personal concern for researchers and clinicians in the highly competitive, publish-or-perish environment of contemporary academia. Of course, if we are clever or lucky enough to come up with that Nobel Prize-winning discovery, great science will carry the day and we are likely to get published even if our writing is fairly horrid. But most of us who publish are "bread-and-butter" scientists. We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year. For us, convincing, engaging writing will make the difference between being published or rejected, or at least it will make the difference between being published on the first submission or having to go through a number of revisions (or journals). None of this is to propose that good writing can make a silk purse out of a sow's ear. Scientific content is the sine qua non of

biomedical writing.
