Media Economics and Management Jan 12 2021 This book offers a comprehensive understanding of key concepts and terms in media economics and management and explains their applications using relevant data. Beginning with a conceptual study of media markets, industry structures, firm behavior, public policy, production, pricing and consumption choices in media industries, the book uses the framework to present an in-depth examination of the management of four major media industry sectors in India: newspaper publishing, television broadcasting, film, and digital media industries. It also deals with two topics relevant across media business sectors: creative industries approaches and copyright

issues. The book discusses the economic forces and factors that shape the workings of media industries and institutions in India to highlight trends in a business that is rapidly evolving, highly profitable and is marked by regional, linguistic, economic and cultural diversity. This volume is a step towards formalizing the emerging field of media economics and management within the discipline of mass communication and journalism as an area of research and education in India. An accessible guide to the basic principles and concepts of media economics and management, with illustrations from Indian and global media industries, this will be an essential resource for students, researchers and teachers of media and communication studies, media economics and management, political economy, sociology as well as for professionals in media industries.

Economic Instruments for Water Management Nov 09 2020 This book argues that the economic appeal of using water charges to promote efficiency in usage and pollution control can be constrained by institutional and operational problems. Analysing the cases of France, Mexico and Brazil, the authors - respective local experts - illustrate that barriers are similar despite the existing differences among these economies. Each country evaluation within the book is analysed using the same framework, covering topics of relevance for the application of a policy instrument, namely: policy analysis phase: the policy setting in which the water economic instrument (EI) was introduced as a means of achieving policy goals instrument design phase: the theoretical, institutional and legal basis on which the EI was conceived instrument implementation phase: successes and failures of the EI application and its review process. Based on this comparative analysis, the authors gather substantial material on institutional and operational barriers constraining the full application of water charges. They also identify possible solutions already in place in these countries to remove or mitigate these barriers. The book concludes that although mistakes and solutions vary, valuable lessons can be learnt by those making decisions on water management and environmental pricing. Providing a concise and didactic background on the theoretical, conceptual and operational issues related to environmental pricing, this book will appeal to students, researchers, policy makers and practitioners with a specific interest in water management.

Management of Changes in Socio-Economic Systems Jan 24 2022 This book addresses changes in socio-economic systems. To do so, it employs the evolutionary approach, which views changes in socio-economic systems from an evolutionary standpoint connecting the past, present and future, and focuses on preventing sudden, high-risk changes. The changes in socio-economic systems are also studied with the help of the system approach, which calls for assessing complex economic subjects, characterized by the sustainable connections between their elements, as socio-economic systems. Combining these two approaches in the context of studying the changes in socio-economic systems is unprecedented in modern economic science. The book studies various issues that cover both fundamental aspects of the system organization of economy and management and applied aspects of managing changes in socio-economic systems. The target audience of the book includes scholars and experts whose work involves studying the dynamic process of modern socio-economic systems' development. The scientific conclusions and practical recommendations that the book provides can be applied to the development and implementation of state economic policy in various countries around the world.

2022 The COVID-19 pandemic has made it necessary to redefine the most significant challenges faced by individual economies and society today. It contributed to the change of contemporary social, technological and economic trends, the effects of which will indeed be the subject of many scientific studies in the coming years. As the pandemic progresses, it promotes reflection and summaries of the consequences of behaviors or omissions in each country. One of them is a synthetic presentation of ten lessons from the pandemic (Gorynia, 2021), which the professor accurately diagnoses in the economic context: 1) the pandemic as a non-economic (sanitary-medical) shock that caused the economic, social and political crisis; 2) the pandemic as a "black swan", an unpredictable threat of high species gravity, but requiring anticipation to minimize its harmful effects in the future; 3) determining the causes of the appearance of the virus determines different preventive actions for future threats; 4) resilience as the foundation of long-term economic efficiency; 5) the set of measures to counteract the harmful effects of a pandemic should not be unified but adapted to the specificity of the facilities it is to affect; 6) the world economy as a system of vessels connected with its positive and negative consequences; 7) the pandemic highlighted the role of coordination of international cooperation; the shortcomings of globalization must be overcome by fairly sharing the positive fruits of international cooperation and resilience aimed at diversifying supplies; 8) economic policy pursued by individual states with a view to preventing the effects of the economic crisis caused by a pandemic cannot be voluntary; 9) the pandemic has sharpened the perception of the shortcomings of contemporary economic, social and political systems and prompts the questioning of certain pillars of the market economy (e.g., homo oeconomicus, individual and global rationality, private and state property, canons of monetary, fiscal, budgetary or industrial policy); 10) the pandemic increases the pressure on systemic and holistic thinking taking into account green economic development, saving energy, water and other resources, using renewable energy sources, avoiding wastage of resources, paying attention to social inequalities in the world, regions and countries, solving poverty problems, and social exclusion. This monograph is partially a response to the in-depth issues covered in these lessons. The authors of individual chapters challenge contemporary topics relating to the COVID-19 pandemic, industry and inter-organizational cooperation, pro-environmental, resilient, and innovative organizations. The monograph consists of three parts. The first part (PART 1) covers an overview of very recent research, considering the impact of COVID-19 on the economy, industries, and business. The article by Anna Ujwara-Gil and Bianka Godlewska-Dziobo deals with, among others, the issues relating to pandemic impacts on the slowdown in the functioning of the construction, electric automotive, and water industries. Also, it affects the tourist industry, where countries are starting to pay attention to the resource-saving green economy and problems of professional exclusion in the pandemic era. In another article, Maria Czech refers to the influence of public debt on the volatility of spreads during the COVID-19 pandemic. This research is part of the study on the use of sovereign credit default swap spreads to assess a country's credit risk, which may be distorted in a pandemic period. It is undisputed that the COVID-19 pandemic has a global dimension. The crisis resulting from disorders such as in value chains has caused industry to slow down. The Czech luxury fashion industry is no exception. As Radka MacGregor Pelikánová points out, COVID-19

has turned out to be a threat to its development.. Leading Czech luxury fashion companies withdrew to a passive role and felt the negative consequences of the pandemic. As the Author points out, few have engaged in corporate social responsibility and showed ingenuity, which increases their chances of survival in the future. In other studies, Tereza Horáková and Kateřina Maršíková identified factors influencing the environment of effective knowledge exchange in SMEs, which in the era of hybrid work during COVID-19, is particularly important. The second part of the monograph (PART 2) includes two studies on the photovoltaic cell industry in China from the perspective of comparative and intra-industry advantage. As a significant player in the global trade scene and various value chains, China is a fascinating subject of research undertaken by Paweł Brusilo and Bogusława Drelich-Skulska. The results of the first article demonstrate the success of the Chinese industry in terms of growth potential, competitiveness, and development opportunities thanks to effective state support and favorable market forces. As the authors point out, the Chinese solar cell industry has not been studied so far in the context of comparative advantage and the new structural economy. The results show the way for other countries to consider or develop innovative industries, such as renewable energy and solar energy. In the second article, Paweł Brusilo examines the topic of the Belt and Road Initiative in the context of the Chinese photovoltaic cell industry, energy transition policy, identification of modern intra-industry trade patterns and opportunities for this industry, which is characterized by significant state interventionism. The considerations in this article may inspire EU countries to deepen economic and trade cooperation in the export and import of solar cells with China. On the other hand, Joanna Kurowska-Pysz has undertaken the analysis of the cooperation conditions within the innovative processes of representatives of science, business, the legislative, and economic environment cooperating on the capital market. The Author focused on the motivators, barriers, but also the search for an effective form of development of intersectoral cooperation enabling the exchange of knowledge and experience, learning, including the flow of personnel between sectors, joint organization of conferences, seminars, training, and implementation of research projects constituting the basis of innovative processes, or the diagnosis of network relationships. The model proposed by the Author will surely inspire other researchers. The third part of the monograph (PART 3) includes articles referring, inter alia, to the pro-environmental organizational culture of enterprises. Katarzyna Piwowar-Sulej, as an advocate of this valuable orientation today, has shown that organizations are interested in developing pro-ecological behavior and are aware of their impact on the natural environment. The article is in line with the global trend focused on the sustainable, ecological, and green economy enterprises operating in this trend, not only because of COVID-19. Taking action to develop a pro-ecological organizational culture, taking care of the natural environment is not only a moral and ethical requirement but also an obligation for the future generation. This part also includes an article by Piotr Tomszys and Bartosz Grucza, who present an inspiring model of organizational resilience and an attempt to operationalize it. The organizational resilience model proposed by the Authors is in line with the growing interest in the analyzes and measurement of the enterprises' resilience. The conceptualization and measurement of economic resilience can inspire other researchers to further research in this area. The COVID-19 pandemic, as an unpredictable and destructive shock, might be a unique

opportunity to verify the developed model, as the authors point out. The last article deals with the issue of innovative management and its measurement based on a proprietary tool developed by Magdalena Gorzelany-Dziadkowiec. The considerations undertaken by the Author are a reliable starting point for further research concerning the impact of COVID-19 on the organization's functioning, the development of innovative management, changes in work processes, and interpersonal relations in the era of increasingly dominant digital technology and skills to use it. The editors profoundly thank all the Authors for their valuable contribution to this monograph and cooperation in its co-creation. We address our grateful thanks to all the Reviewers for their insightful evaluation and high standards of their work. These special thanks go to (in alphabetical order) Barbara B?aszczyk Institute of Economics, Polish Academy of Sciences; Justyna Bugaj, Jagiellonian University; Anna Fornalczyk, COMPER Fornalczyk and Wspólnicy; Marta Gancarczyk, Jagiellonian University; Anna Maria Lis, Gda?sk University of Technology; Andrzej Lis, Nicolaus Copernicus University; Mieczys?aw Morawski, Warsaw University of Technology; Pawe? Pisany, Institute of Economics, Polish Academy of Sciences; Natalia R. Potoczek, Institute of Economics, Polish Academy of Sciences. We also thank Pawe? Japo? for his thorough proofreading of this monograph.

The Economics and Management of Small Business Nov 21 2021 This book provides an international perspective on small business, and includes many useful pedagogical features such as questions for discussion, international case studies and empirical research.

Business and Economics of Port Management Nov 29 2019 Business and Economics of Port Management is a comprehensive but concise textbook and reference for insights into the workings of port industry from the business and economics perspectives. The book examines port management from various entities which include the government, port operator, shipping line, logistics companies and other port service providers. It provides in-depth discussions on strategic issues, challenges and disruptions that are faced by this industry. Given the uniqueness of each port and international nature of the port business, the book comes with useful case studies and lessons from different port regions around the world. Key lessons on challenges and issues faced by port managers, developers and regulators are highlighted and discussed using a combination of professional insights and publicly available information sources. The aim is to illustrate the decision-making process with the purpose of contributing to better outcomes for the industry, government and the public at large. Anyone who is approaching the subject matter will gain utmost understanding of how ports are critical in the global economy and societal well-being.

Economics for Business and Management Apr 26 2022 "The 2nd edition of Economics for Business and Management focuses on real-life business situations in both functional and strategic areas of business and management. It applies key concepts in economics and business to a wide variety of situations helping you to answer questions such as: Why is offshoring now a major concern for South Korea? What are the key characteristics for successful entry to new international markets? How can 'sustainability' affect decision making within businesses? This is the ideal textbook for students following courses in introductory economics with a business and management focus. Its detailed consideration of wider dimensions of the business environment, such as political, legal, ethical, sociocultural, technological and environmental issues, make it more suitable for more

general courses on the business environment with an economic underpinning."--Cover.

Engineering Managerial Economic Decision and Risk Analysis Oct 01 2022 This book directs the engineering manager or the undergraduate student preparing to become an engineering manager, who is or will become actively engaged in the management of economic-risk trade-off decisions for engineering investments within an organizational system. In today's global economy, this may mean managing the economic risks of engineering investments across national boundaries in international organizations, government, or service organizations. As such, this is an applied book. The book's goal is to provide an easy to understand, up to date, and coherent treatment of the management of the economic-risk trade-offs of engineering investments. This book accomplishes this goal by cumulatively sequencing knowledge content from foundational economic and accounting concepts to cost estimating to the traditional engineering economics knowledge culminating in fundamental engineering managerial economic decision-making incorporating risk into engineering management economic decisions.

Process Management and Organizational Process Maturity Mar 02 2020 This book addresses the need for a better understanding of the design, implementation and improvement of process management. It presents and organizes concepts and problems in the field of process management, and indicates supporting tools assigned to each of the four basic stages of the process life cycle (modeling, implementation, verification and perfection). By comparing non-economic and economic organisations, the authors demonstrate that a uniform approach to process management (one that does not take into account the specifics of an organizations goals) is ineffective; instead, process management needs to account for the individuality of an organisation. This book will appeal to researchers studying process and organizational excellence.

Innovation Economics, Engineering and Management Handbook 1 Feb 22 2022 Innovation, in economic activity, in managerial concepts and in engineering design, results from creative activities, entrepreneurial strategies and the business climate. Innovation leads to technological, organizational and commercial changes, due to the relationships between enterprises, public institutions and civil society organizations. These innovation networks create new knowledge and contribute to the dissemination of new socio-economic and technological models, through new production and marketing methods. Innovation Economics, Engineering and Management Handbook 1 is the first of the two volumes that comprise this book. The main objectives across both volumes are to study the innovation processes in todays information and knowledge society; to analyze how links between research and business have intensified; and to discuss the methods by which innovation emerges and is managed by firms, not only from a local perspective but also a global one. The studies presented in these two volumes contribute toward an understanding of the systemic nature of innovations and enable reflection on their potential applications, in order to think about the meaning of growth and prosperity.

Waste Management as Economic Industry Towards Circular Economy Aug 31 2022 This book highlights the latest advances in waste management, resource recovery and resource circulation in various countries, with a special emphasis on India. It leads the way towards a sustainable circular economy developing local economy and enhances the sustainability of the energy sector as a whole by holistically addressing waste management.

Waste management is a major problem around the globe; effective waste disposal is one of the most plaguing issues faced by municipalities. Yet waste can also serve as a major source of energy rather than a disposable material. The book discusses various upstream and downstream aspects of waste management systems, e.g. conversion processes and collection methods, that are needed in order to make waste management systems into an effective industry and move closer to a circular economy. It also provides information on management tools for analysis and decision support. All chapters included here are based on high-quality research papers presented at the conference IconSWM 2018.

Self-Management Jul 30 2022 Offers a comprehensive survey of how workers' self-management has influenced industrial structure and the allocation of resources in Yugoslavia.

Media Management and Economics Research in a Transmedia Environment Jun 04 2020 This landmark work centers on media management and economics within a diverse, international, historical and constantly changing environment. The chapters herein reflect the current state of research and present directions for future study. Developed at the 2012 Research Symposium in conjunction with the annual convention of the Broadcast Education Association, it represents the most current theory and research in the area.

Economic Management of Marine Living Resources May 04 2020 First Published in 2011. Routledge is an imprint of Taylor & Francis, an informa company.

Study and Master Economic and Business Management Grade 7 for CAPS Learner's Book Jul 18 2021

The Economics of Workers' Management Dec 11 2020 The object of this study, originally published in 1972, consists in developing, against the background of Yugoslav theory and practice, a general theory of the behaviour of economic productive units (the enterprises), managed by those who work therein (the workers or producers) whose reward for work in their share in the group's net income. This title will be of interest to students of employee ownership and economic democracy.

Natural Resource Management and the Circular Economy Jul 06 2020 This book provides insight into how governments are using a variety of innovative fiscal and non-fiscal instruments to develop circular economies with significant economic and environmental benefits. It emphasises the urgent need for these circular economies and to move away from our current, linear model that has led to environmental degradation, volatility of resource prices and supply risks from uneven distribution of natural resources. *Natural Resource Management and the Circular Economy* illustrates how governments have promoted the development of an economy that can provide substantial net material savings; mitigate price volatility and supply risks; and improve ecosystem health and long-term resilience of the economy. Through a series of case studies, it details the various innovative policy instruments which can be utilised, including regulations; market-based instruments; incentives; research and innovation support; information exchanges; and support for voluntary approaches. The book also proposes a series of best practices for different countries, both developed and developing, who are implementing their circular economy.

Environmental Valuation Aug 26 2019 This companion volume to *Economic Instruments for Environmental Management* presents essential information on the applications of economic valuation to environment and development. It draws on a three-year collaborative

effort by research institutions around the world. Authoritative studies review the range of valuation methods used in developing economies, their purposes, the problems encountered and the quality of the results. Topics covered include the value of wildlife viewing, the conservation of rainforests, mangroves and coral reefs, supplying rural water, and controlling urban air pollution. The analysis reveals important methodological and contextual factors, highlighting key lessons and ways of strengthening future valuations. Written to be accessible to non-economists, the book provides source material for students and academics, and for policy-makers and professionals, using valuation methods to frame policy.

Wisdom and Management in the Knowledge Economy Jun 24 2019 Today there are more technology, technologists, knowledge and experts than at any time in human history; but from a global perspective, it is difficult to argue that this accumulation of knowledge and technology has put the world in an unambiguously better position than it was in the past. Business is not getting any easier to do and major corporate collapses based on poor decisions, poor conduct, and poor judgement continue to occur. In public administration too, basic institutions and services (education, health, transport) seem to be continually undergoing “crises” of inadequate delivery and excessive pressure. *Wisdom and Management in the Knowledge Economy* explains why unwise managerial practice can happen in a world characterized by an excess of information and knowledge. Drawing on Aristotle’s idea of practical wisdom, the book develops a theory of social practice wisdom that addresses important social psychological and sociological dynamics that underpin wise management and organizations. As well as providing a detailed theory of social practice wisdom, this book considers practical issues in organizational communication, behavior, culture, change and knowledge as well as in HRM, leadership, ethics, strategy, international business, business education, and wisdom research. By introducing the notion of social practice wisdom, aspects of social structure, organizational culture, and organizational communication needed for wisdom to flourish are for the first time rendered visible in a way that opens new possibilities for wiser management, wiser organizations, and wisdom research.

Managers and Management in Vietnam Sep 19 2021 This book presents a comprehensive overview of managers and management in Vietnam, based on extensive original research, including interviews with a large number of managers in Vietnam. It shows how management in Vietnam is best understood from the perspective of Vietnamese managers themselves, rather than in terms of Western or Asian models of management. It discusses the range of enterprises in the Vietnamese economy, which, until 1986, was dominated by large state-owned enterprises and Soviet-style central economic planning, and where there is now a much greater variety, with a mix of privatised state-owned enterprises, foreign-owned companies, joint ventures and a very large number of relatively small private companies, all operating in a social market economy where Party ideology emphasises a balance between economic growth and workers' rights. The book demonstrates how the tensions arising from this economic landscape are reflected in the views and actions of managers as they balance economic and social goals in their work, and how their activities are constrained further by the enduring influence of local culture which is not always amenable to imported ideas and methods. As many managers have worked in different

kinds of companies, the book also reveals a great deal about management in different contexts and also about how companies have changed as the reform process has evolved.

Social and Economic Management in the Competitive Society Aug 19 2021 In many countries of the world there is a growing feeling of uneasiness about the economic situation and its related social consequences. Every day the newspapers tell us that the recession is over, but we see only that scores of organizations go bankrupt, while others are struggling hard to stay in business; that many people have lost their jobs, but welfare measures are being reduced or abolished altogether. By now we should have become aware that our society is not facing temporary market difficulties, but a much deeper and wider crisis with only one root in worldwide economic developments, while other roots are social and psychological in nature. These factors are intertwined, and therefore the answer to the crisis cannot merely be an economic cost-benefit analysis of organizational management. Sociocultural factors participate in the economic process even at the level of individual organizations, and what happens in them has backlash influences on the entire society. Therefore the problem is not the management of the individual organization, but the macroconception of management, which in the Western world of today separates the economic aspects from the social ones, and the individual organizations from society. *Social and Economic Management in the Competitive Society* begins by analyzing the management models of today to determine which characteristics yield the best results on the economic and social levels. The second step is to indicate the necessary changes of managerial thinking and acting, in order to boost economic results with reasonable profits while minimizing social costs. Finally, the potential ramifications of such changes are explored.

Economic Foundations of Strategic Management Sep 27 2019 This book explores the extent to which economic theory is able to provide the theoretical foundations of strategic management. To this end it draws on the philosophy of science; microeconomic theory; and different approaches to strategic management. The work shows that many of the propositions of strategic management are deducible from the economic theories considered. It argues that these propositions should be made open to empirical testing and that a unified theory of strategic management should be developed. Thus the book addresses a current major concern of theorists - that strategy remains 'atheoretical' and that this reduces the predictive power of the subject and hampers further theory development. The essential contribution made is that economic theory should be systematically explored in order to establish the foundations of business strategy.

Project Life Cycle Economics Jul 26 2019 The financing of modern construction projects reflects the need to address the costs and benefits of the whole life of the project. This means that end of life economics can now have a far greater impact on the planning and feasibility phases. During the project itself, decisions on construction materials and processes all influence the schedule as well as both immediate and down-the-line costs. Massimo Pica and his co-authors explain in detail the fundamentals of project life cycle economics and how they apply in the context of complex modern construction. This is an essential guide for those involved in construction project design, tendering and contracting; to help ensure the sustainability of the project or their contribution to it, from the start. It is also important for those involved in the delivery of the project to help them make the

choices to keep the project on a financial even keel. Government, corporations and other organizations are looking for new models of collaborative working to fund their large construction and infrastructure projects in the face of changing attitudes to risk; a better educated and more demanding base of end-user clients and the increasing requirements for projects that are environmentally responsible and sustainable. Project Life Cycle Economics is a fundamental primer for those commissioning and those delivering construction.

The Yugoslav Economy Under Self-management Oct 09 2020

Handbook of Research on Financial Management During Economic Downturn and Recovery Apr 14 2021 Times of crisis are unexpected and they bring diverse challenges and opportunities for companies, financial markets, and the economy. On one hand, more risk and uncertainties appear, yet on the other hand, it is an opportunity to reorganize and reinvent the company. It is important for businesses to understand ways to deal with uncertainty and risk in times of economic downturn and what financial strategies and tools can be used to eliminate or reduce the potential negative effects. These effects can reach the company's financial performance, capital structure, as well as cause financial debt and the availability of cash-flow to companies. However, different financial instruments can sustain the business and deal with the difficulties of payment when sales reduce and uncertainty increases; thus, research is essential in this critical area. When economic downturn affects the financial markets, the role of banks, country dynamics, the economy, and many other facets of the business world, financial management becomes the key for business recovery. The Handbook of Research on Financial Management During Economic Downturn and Recovery shares relevant knowledge on challenges and opportunities caused by crises, such as the pandemic, and the effects on economic and financial arenas. The chapters cover topics such as business models to understand how companies react to pandemic and crises situations, as well as how they change their management and way of conducting business. Other important topics include sustainable development, international financial markets, capital structure changes, uncertainty and risk, and governance and leadership. This book is ideal for shareholders, directors and managers, economists, researchers, academics, practitioners, stakeholders, researchers, academicians, and students interested in knowledge on topics about challenges in the way that companies, financial markets, financial institutions, and governments respond to risk and uncertainty.

Managing Emerging Technologies for Socio-Economic Impact Feb 10 2021 The development of emerging technologies demands a rapidly expanding knowledge base and intensive collaboration across organizational, institutional and cultural borders. This book focuses on the management of key emerging technologies and their social and economic impact on Europe. Split into four parts, across 17 chapters, the scholars offer multiple levels of analysis concerning the management of emerging technologies across various sectors ranging from nanotechnology, renewable energy and cloud computing to synthetic biology and particle therapy for cancer.

Principles of Economics and Management for Manufacturing Engineering Oct 21 2021

Principles of Economics and Management for Manufacturing Engineering combines key engineering economics principles and applications in one easy to use reference. Engineers, including design, mechanical, and manufacturing engineers are frequently involved in economics-related decisions, whether directly when selecting materials or indirectly when

managers make order quantity decisions based on their work. Having a knowledge of the management and economic activities that touch on engineering work is a core part of most foundational engineering qualifications and becomes even more important in industry. Covering a wide range of management and economic topics from the point-of-view of an engineer in industry, this reference provides everything needed to understand the commercial context of engineering work. Covers the full range of basic economic concepts as well as engineering economics topics Includes end of chapter questions and chapter summaries that make this an ideal self-study resource Provides step-by-step instructions for cost accounting for engineers

Country Experiences in Economic Development, Management and Entrepreneurship

Mar 26 2022 This volume brings together selected papers from the 17th EBES Conference, organized in Venice in winter 2015. The theoretical and empirical papers present the latest research in diverse areas of business, economics, and finance from many different regions. They chiefly focus on the interactions between economic development, entrepreneurship and financial institutions, especially putting the spotlight on cross-country evidence. Topics range from women's entrepreneurship and economic regulation, to sustainability and climate change. This book provides researchers, professionals, and students a great opportunity to catch up on the latest studies in different fields and empirical findings on many countries and regions.

Spot on Economic and Management Sciences Jan 30 2020

The Economic Management of the Firm Aug 07 2020 Over the past twenty years many advances have been made in understanding the internal organization and management of firms. This book sets out comprehensively, logically and concisely the current body of knowledge relating to all aspects of the firm in developed economies. It provides a critical evaluation of decision techniques and processes and considers possible responses by firms to many varied situations. A knowledge of intermediate-level economics is assumed, as well as an appreciation of basic mathematical procedures.

Economics for Business and Management Mar 14 2021 *Economics for Business and Management: A Student Text* introduces the key principles of microeconomics and macroeconomics and applies them to a wide variety of situations encountered by business decision makers. This book has been written for students following courses on introductory economics, business economics or business environment. It serves as an invaluable aid for students in the early stages of an undergraduate or equivalent programme with an economics, business or management focus.

Economics, Organization, and Management Sep 07 2020 A systematic treatment of the economics of the modern firm, this text draws on the insights of various areas in modern economics and other disciplines and presents the central problems in organizations of motivating people and co-ordinating their activities.

The Global Emerging Market May 16 2021 Despite the growing importance of the global emerging market (GEM) for the world's business, economics, and politics, it has received a relatively scant amount of academic attention in business and economics courses. This textbook is the first to focus on the GEM and its strategic and economic characteristics. *The Global Emerging Market: Strategic Management and Economics* describes the fundamental economic base and trends of the global marketplace (GMP) as well as business and

management development for the conditions of emerging-market countries (EMCs). Focusing on the formation of a strategic mindset and the decision making process, it explains how to analyze the basic economic factors and the global order, especially in times of crisis. This text also explains how to classify countries related to this new market of tremendous opportunities. Furthermore, the book includes recommendations on how to develop entry and exit strategies for the GEM, work in it and create efficient management systems. Features include: Extensive tables, charts, and graphs illustrating the strategic considerations of the GEM and the GEM End-of-chapter study questions Practical examples based on the author's involvement in the development of the GEM, from both sides of the international transactions This academic book is the ideal guide for current business leaders and students on how to make strategic, symmetric, and asymmetric time-sensitive decisions related to the GEM.

Economic Crisis Management May 28 2022 Economic Crisis Management discusses contemporary and economic policy and its application to major crisis economies in Asia. The book contains a collection of studies by international experts in economics and finance with special focus on major aspects of the economic management of the Asia crisis.

Economic and Management Sciences, Grade 9 Apr 02 2020

Economics of Environmental Conservation Oct 28 2019 This fully updated and comprehensively revised edition of a classic text concentrates on the economics of conserving the living environment. It begins by covering the ethical foundations and basic economic paradigms' essential for understanding and assessing ecological economics. General strategies for global environmental conservation, policies for government intervention, developing countries, preserving wildlife and biodiversity, open-access to and common property in natural resources, conservation of natural areas, forestry, agriculture and the environment, tourism, sustainable development and demographic change are also all covered. This second edition deals with contemporary environmental policy issues that can be expected to be of lasting concern and importance - each chapter benefiting from either the addition of substantial sections of new material, valuable explanations or updates and revisions in light of developments in theory or world events and conditions. Updated techniques of economic analysis are also introduced, explained simply, and applied as appropriate. Economics of Environmental Conservation, Second Edition is written in an engaging and accessible manner and as such will be warmly received by both specialists and non-specialists in economics. It will find a wide readership amongst academics and policymakers in the fields of ecological, environmental and natural resource economics as well as those involved in development studies, environmental management and science, and conservation ecology and biology. Particular chapters will be of interest to those in tourism studies, agriculture, wildlife management and forestry

Strategic Management and Economics in Health Care Dec 31 2019 This book offers significant managerial and economic knowledge on hospitals, and will serve as a valuable tool for explaining complicated managerial and economical problems, and for facilitating decision-making processes. It bridges management and economic sciences - two complementary sciences that feed the process of making rational decisions. With particular reference to the education, the main aim of this book is to provide students of relevant schools and departments with the knowledge (managerial and economic) that will enable

them to deal both efficiently and effectively with the real problems arising in a health care organization such as a hospital. In particular, by equipping students with appropriate managerial and economic knowledge, the aim is to give them a clear understanding of HOW to deal with the diverse and complex problems of hospitals while at the same time helping them to develop strategic approaches that will make hospitals more efficient and sustainable.

The Economic Theory of Pollution Control Jun 16 2021 This book makes the theory accessible to a wider range of economics students and to researchers in disciplines such as engineering, urban, and environmental studies who need a nontechnical introduction to the economic analysis of pollution.

Legal-Economic Institutions, Entrepreneurship, and Management Nov 02 2022 The study of dynamics of institutional change in emerging markets are subjects of great interest in contemporary political economy. The dynamics and quality of institutional change can have significant impacts on the long-run performance of economies, economic growth and development of nations, and play a fundamental role in societies. It provides a comprehensive understanding of legal-economic institutions, and sheds light on the way to global peace by producing a better understanding of the dynamics of historical change. Topics range from institutional uncertainty, hybrid market order and labor market institutions, to good governance of institutions and WTO rules as trade institutions, as well as entrepreneurship and institutional change in emerging markets, and the role of modern technologies. This edited volume emphasizes legal-economic institutions, and the role of management and entrepreneurship on dynamics, trends, and implications of institutional change in emerging markets. Presenting research articles by eminent scholars and experts engaged in education and research, who address and discuss the most recent issues in the field, they reveal new insights into the dynamics of institutional change for researchers interested in development of new theories and comparative studies, especially in the era of emerging markets. The book is appealing to a wide range of global audience, can serve as a useful reference work in education and research, offers innovative and productive discussions, and can satisfy scholarly and intellectual interests, regarding institutional development and a broad spectrum of its interactions with functioning of markets and economies.

Economics and Management of the Food Industry Dec 23 2021 This book analyzes the economics of the food industry at every stage between the farm gate and the kitchen counter. Central to the text are agricultural marketing problems such as the allocation of production between competing products (such as fresh and frozen markets), spatial competition, interregional trade, optimal storage, and price discrimination. Topics covered will be useful to students who expect to have careers such as food processing management, food sector buying or selling, restaurant management, supermarket management, marketing/advertising, risk management, and product development. The focus is on real world-relevant skills and examples and on intuition and economic understanding above mathematical sophistication, although the text does draw on the nuances of modern economic theory.
