*Organic Chemistry for Schools* Jul 30 2022 Organic compounds are

ubiquitous in nature. They are present in food, commercial products, domestic materials, and all the cells of the human body. The realization that the chemistry of organic compounds permeates all life forms, often stimulates the desire of many students to pursue studies in medical- and natural-chemistry-related fields. In my own case, although I had always been fascinated by chemistry in general, I only opted to study it at a higher level by default. This is because prior to my university education, I barely understood its various concepts. But this changed dramatically when at university, I was lucky enough to be taught by some very inspirational, experienced and internationally-acclaimed chemistry teachers, who actually lived the subject. Interestingly, even then, there were only a few relevant, user-friendly textbooks on the subject. As I have discovered over the years, organic chemistry is so broad and covers so much that for effective delivery, not only must those who teach the subject constantly adopt innovative methods of teaching, there must also be readily-available and easy-to-read textbooks. Because of the apparent complexity of the subject, organic chemistry teachers must always aim to instill a love of learning for it, by imparting knowledge in ways that can be motivating and exciting. When students have access to relevant, user-friendly textbooks and lessons are made interactive, simple, clear and exciting, rather than dominated by learning by rote, organic chemistry can be both interesting and easy-to-understand. This book is an attempt to contribute to the growing body of knowledge that aims to stimulate students' interest, and love for the wonderful world of organic chemistry. The intention is to equip students with the basic concepts, so they can refrain from simply memorizing, but rather seek to understand and not be intimidated by it.

*Intellectual, Scientific, and Educational Influences on Sustainability Research* Oct 21 2021 Over the last few decades, the new discipline of sustainability science (SS) has evolved with a phenomenal rise in knowledge production, research, and publications, as well as the development of new academic programs and creation of centers and

scientific communities, networks, and organizations. With pressing global environmental issues in the 21st century, SS has become an influential discipline and important subject of intellectual inquiry that deserves support from the academy and scientific communities worldwide to find solutions to global problems such as climate change, environmental degradation, and biodiversity loss. *Intellectual, Scientific, and Educational Influences on Sustainability Research* is a concise and authoritative book that fills the crucial and unmet need for educational materials that integrates theoretical foundations, methodological basis, and practice in the science of sustainability. The goal of the book is to increase accessibility and use of educational and scientific knowledge among academic and non-academic audiences as it assembles the wisdom and insights from up-to-date scholarship and advances in this new discipline. Highlighting various topics such as biodiversity, public transportation, and human development, it is ideal for environmentalists, ecologists, technology developers, policymakers, academicians, researchers, and students.

BICED 2020 Jul 18 2021 The Faculty of Education and Teaching Institut Agama Islam Negeri (IAIN) Bukittinggi, West Sumatera Indonesia, organized the 2nd International Conference on Education (BICED 2020) on 14-15 September 2020 in Bukittinggi, West Sumatera, Indonesia. The number of participants who joined the zoom room was recorded at 736 participants. 224 participants attended the conference via the zoom application and 539 participants via YouTube Channel. Participants came from 5 countries, namely Indonesia, Malaysia, Kuala Lumpur, Brunei Darussalam, Thailand and Australia. BICED 2020 is implemented with the support of a stable internet network system and a zoom application. In the implementation there were several technical obstacles encountered by the participants, namely the difficulty of joining the zoom application due to the unstable internet signal. The holding of a virtual conference felt less meaningful, due to the lack of interaction between speakers and participants. The BICED 2020 committee 29 papers were presented and discussed. The papers were authored by researchers from Australia, Brunei Darussalam, Thailand,

Malaysia, United Kingdom, and Indonesia. All papers have been scrutinized by a panel of reviewers who provide critical comments and corrections, and thereafter contributed to the improvement of the quality of the papers.

**Microbial Action on Hydrocarbons** Dec 23 2021 The book discusses ways to overcome the side effects of using hydrocarbon-based products as energy sources. Hydrocarbons produce raw crude oil waste of around 600,000 metric tons per annum, with a range of uncertainty of 200,000 metric tons per year. The various chapters in this book focus on approaches to reduce these wastes through the application of potential microbes, in a process called bioremediation. The book is a one-stop reference resource on the methods, mechanisms and application of the bio-composites, in the laboratory and field. Focusing on resolving a very pressing environmental issue, it not only provides details of existing challenges, but also offers deeper insights into the possibility of solving problems using hydrocarbon bioremediation.

*Teaching Chemistry Around the World* May 28 2022 As teachers we often tend to expect other countries to teach chemistry in much the same way as we do, but educational systems differ widely. At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world: Teaching Chemistry around the World. 25 countries have participated in the project. The resulting country studies are presented in this book. This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries. Especially in the case of the school subject chemistry, which is very unpopular on the one hand and occupies an exceptional position on the other hand – due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving – we have to learn from each others' educational systems.

[Oil in the Sea III](#) Aug 07 2020 Since the early 1970s, experts have recognized that petroleum pollutants were being discharged in marine waters worldwide, from oil spills, vessel operations, and land-based sources. Public attention to oil spills has forced improvements. Still, a considerable amount of oil is discharged yearly into sensitive coastal environments. Oil in the Sea provides the best available estimate of oil pollutant discharge into marine waters, including an evaluation of the methods for assessing petroleum load and a discussion about the concerns these loads represent. Featuring close-up looks at the Exxon

Valdez spill and other notable events, the book identifies important research questions and makes recommendations for better analysis of "and more effective measures against" pollutant discharge. The book discusses: Input "where the discharges come from, including the role of two-stroke engines used on recreational craft. Behavior or fate "how oil is affected by processes such as evaporation as it moves through the marine environment. Effects "what we know about the effects of petroleum hydrocarbons on marine organisms and ecosystems. Providing a needed update on a problem of international importance, this book will be of interest to energy policy makers, industry officials and managers, engineers and researchers, and advocates for the marine environment.
