Abstract Algebra May 16 2021 To learn and understand mathematics, students must engage in the process of doing mathematics. Emphasizing active learning, Abstract Algebra: An Inquiry-Based Approach not only teaches abstract algebra but also provides a deeper understanding of what mathematics is, how it is done, and how mathematicians think. The book can be used in both rings-first and groups-first abstract algebra courses. Numerous activities, examples, and exercises illustrate the definitions, theorems, and concepts. Through this engaging learning process, students discover new ideas and develop the necessary communication skills and rigor to understand and apply concepts from abstract algebra. In addition to the activities and exercises, each chapter includes a short discussion of the connections among topics in ring theory and group theory. These discussions help students see the relationships between the two main types of algebraic objects studied throughout the text. Encouraging students to do mathematics and be more than passive learners, this text shows students that the way mathematics is developed is often different than how it is presented; that definitions, theorems, and proofs do not simply appear fully formed in the minds of mathematicians; that mathematical ideas are highly interconnected; and that even in a field like abstract algebra, there is a considerable amount of intuition to be found.

Computational Intelligence in Digital Forensics: Forensic Investigation and Applications Mar 26 2022 Computational Intelligence techniques have been widely explored in various domains including forensics. Analysis in forensic encompasses the study of pattern analysis that answer the question of interest in security, medical, legal, genetic studies and etc. However, forensic analysis is usually performed through experiments in lab which is expensive both in cost and time. Therefore, this book seeks to explore the progress and advancement of computational intelligence technique in different focus areas of forensic studies. This aims to build stronger connection between computer scientists and forensic field experts. This book, Computational Intelligence in Digital Forensics: Forensic Investigation and Applications, is the first volume in the Intelligent Systems Reference Library series. The book presents original research results and innovative applications of computational intelligence in digital forensics. This edited volume contains seventeen chapters and presents the latest state-of-the-art advancement of Computational Intelligence in Digital Forensics; in both theoretical and application papers related to novel discovery in intelligent forensics. The chapters are further organized into three sections: (1) Introduction, (2) Forensic Discovery and Investigation, which discusses the computational intelligence technologies employed in Digital Forensic, and (3) Intelligent Forensic Science Applications, which encompasses the applications of computational intelligence in Digital Forensic, such as human anthropology, human biometrics, human by products, drugs, and electronic devices.

The Power of Appreciative Inquiry Nov 29 2019 The Power of Appreciative Inquiry describes the internationally embraced approach to organizational change that dramatically improves performance by engaging people to study, discuss, and build upon what's working – strengths – rather than trying to fix what's not. Diana Whitney and Amanda Trosten-Bloom, pioneers in the development and practice of Appreciative Inquiry (AI), provide a menu of eight results-oriented applications, along with case examples from a wide range of organizations to illustrate Appreciative Inquiry in action. A how-to book, this is the most authoritative and accessible guide to the newest ideas and practices in the field of Appreciative Inquiry since its inception in 1985. The second edition includes new examples, tools, and tips for using AI to create an enduring capacity for positive change, along with a totally new chapter on award-winning community applications of Appreciative Inquiry.

A Case Study of a School's Application of Appreciative Inquiry, Soar, and Strengths-Based Practices as Seen in a Range of Educational Projects Feb 22 2022 There is no doubt that we live in a world experiencing unprecedented changes. It is not surprising

that our conversation can have a sense of hopelessness. Easy solutions appear to be few and far between. What is needed in schools is a new discourse that is hope-full, appreciative, strengths-based and relational. This book reports on an innovative 'life-centric' design for the professional development of senior leaders within a primary (elementary) school in New Zealand. The design involved an Appreciative Inquiry approach, a SOAR strategy, and strengths-based outcomes. The chapters are organised around leaders' self-selected, innovative and appreciative inquiries which included an external mentor and writing retreats. Each chapter provides a teacher's narrative on their inquiry, decision making, application of the life-centric design, and the development of emergent and enduring understandings. The AI SOAR strategy has been applied to school-wide matters such as the development of a new bicultural school vision statement; 'Growing creative learners from within.' The Mori translation is 'Kia puwai te ngkau.' This translation evokes an image of learners harnessing that which is within their innermost being and letting that flourish. This book strongly advocates for the greater application of Appreciative Inquiry, SOAR and strengths-based aspirations in schools.

Effective Inquiry for Innovative Engineering Design Nov 21 2021 Effective Inquiry for Innovative Engineering Design presents empirical evidence for this claim. It demonstrates a unique attribute of design thinking by identifying and characterizing a class of questions called "Generative Design Questions". These questions are frequently asked by designers in dialog. Their use constitutes a fundamental cognitive mechanism in design thinking. Their discovery stems from another finding of the work: a conceptual duality between questions and decisions that is engraved deep within the design process. This duality challenges a view that treats designing as decision making. Decisions form the tip of the iceberg; Questions keep it afloat: Can an effective decision making process be performed without having high quality information? Can high quality information be acquired and generated without performing an effective inquiry process? The answer to both questions is no, and underscores the importance of our quest to better understand the role of inquiry in design.
