Quantitative and Qualitative Methods in Psychotherapy Research Jun 08 2020

In this collection, international contributors come together to discuss how qualitative and quantitative methods can be used in psychotherapy research. The book considers the advantages and disadvantages of each approach, and recognises how each method can enhance our understanding of psychotherapy. Divided into

two parts, the book begins with an examination of quantitative research and discusses how we can transfer observations into numbers and statistical findings. Chapters on quantitative methods cover the development of new findings and the improvement of existing findings, identifying and analysing change, and using meta-analysis. The second half of the book comprises chapters considering how qualitative and mixed methods can be used in psychotherapy research. Chapters on qualitative and mixed methods identify various ways to strengthen the trustworthiness of qualitative findings via rigorous data collection and analysis techniques. Adapted from a special issue of *Psychotherapy Research*, this volume will be key reading for researchers, academics, and professionals who want a greater understanding of how a particular area of research methods can be used in psychotherapy.

The Therapeutic Use of Self, will act as a spur to individual counsellors to acknowledge, develop and value their own unique contribution to the counselling profession.

Research Methods in Clinical and Counselling Psychology Aug 30 2019 Research Methods in Clinical and Counselling Psychology presents a practical description of the research process, taking readers sequentially through the basic steps of a project: groundwork, measurement, design, analysis and interpretation. It also addresses essential background issues, such as the underlying philosophy of the various research methods and the socio-political issues that arise in doing research in service settings. Clinical and counselling research methodology is currently developing rapidly, and psychologists are expanding their repertoire of methods. In this book the authors present a balanced appraisal of both traditional and emergent methods. They re-affirm the scientist-practitioner model: that clinical and counselling psychologists have a dual role as both clinicians and researchers. The authors argue that research embraces a broad range of activities which can be incorporated into everyday professional practice. The book is aimed at students and professionals who want to conduct their own research and those who simply want to understand published research better.

Adolescent Counselling Psychology Aug 11 2020 Adolescent Counselling Psychology: Theory Research and Practice provides a thorough introduction to therapeutic practice with young people. As an edited text, it brings together some of the leading authorities on such work into one digestible volume. The text is divided into three major sections. The first provides a context to therapeutic work with young people. This outlines the historical background to such work, the types of settings in which individuals work and the allied professions that they will encounter. Following on from this, the second section introduces the psychology of adolescence and provides an overview of the research into youth counselling. Finally, the third section considers more applied issues. Initially the infrastructure of counselling services is discussed before moving on to reflect upon pluralistic therapeutic practice. To end, the ways in which outcomes may be assessed in such work are described. In covering such a wide territory this text acts as an essential resource to practicing counselling psychologists and other mental health professionals. It provides a foundation to the work that individuals are undertaking in this arena and advocates that individuals enter into therapeutic work in a critically informed way. At the heart of such considerations is the need to utilise psychological theory alongside research findings to inform therapeutic decision making.

Traditional Counselling Nov 01 2019 Traditional counselling is an under-researched field, with inadequate scholarly documentation on the approaches, procedures and process outcomes that should motivate researchers, counselling psychologists and educationists to tap from the abundant uncharted waters. This book represents a major step towards narrowing these gaps. Its main contribution is the articulation of a theoretical framework of traditional counselling, the delineation of traditional counselling approaches and processes, and the clarification of the scope of problems apparent in the sphere of traditional counselling. Traditional counselling is rooted in traditional systems of knowledge and sociocultural values, customs and practices, is essentially community-based

and multicultural in nature, and promotes a collective inclination to problem identification, resolution and management. This underscores the importance, relevance and usefulness of traditional counselling from an African perspective. The book is a thought-provoking investigation on counselling models.

Self Research Feb 03 2020 'Self research' is both a therapeutic and a research endeavour that enables the subject of the research to interpret and validate their own data. In *Self Research*, Ian Law outlines and draws together the theoretical, institutional and practice elements of this work, and offers illustrative examples of how different elements of the methodology can be applied in practice. He proposes a methodology for the practice of self research that is based on an epistemological approach, thereby closing the interpretative gap between the researcher and the researched. Engaging in therapeutic work with those who experience their sense of self as problematic can be transformative in two key respects: it enables them to produce a sense of self which acknowledges that an understanding of one's self is discursively produced, and it helps locate that sense of self within its historical, political and social context. By setting out the theoretical underpinnings of the process across a range of different contexts, Law develops a methodology for doing 'talk therapy', and researching the self that are one and the same. This methodology allows those who are both the subject and object of their own research to have the authority to determine its meaning, relevance and validity. The book will be essential for advanced students of counselling, along with practicing therapists in psychotherapy across different schools of practice.

Part two presents nine studies of work-based psychotherapy or counselling related research. Qualitative Research in Counselling and Psychotherapy Sep 23 2021 `A new book by John McLeod is always a treat and, like good qualitative research, takes the reader by surprise, and shows him or her something new. The revelation to me in this book is its focus on philosophy (rather than psychology) and on John's insistence that qualitative research is rooted in a mixture of phenomenology and hermeneutics. Those of us engaged in qualitative research are challenged to underpin our work with a deeper awareness of relevant philosophy with Chapters 2, 3 and 4 offering a good starting point. This book might not be seen then as being for the novice researcher who, in any case, would be best advised to start with one of John's earlier books: *Doing Counselling Research* (SAGE,1994) or *Practitioner Research in Counselling* (SAGE,1999). However, many parts of this book are essential reading for those beginning qualitative research. The first half of Chapter 9, for example, `How to Do Qualitative Research?' is rich material, as is Chapter 6,

which explores grounded theory, referred to by John as the 2market leader2 in qualitative research. Chapter 10 takes a critical stance on randomized controlled trials before arguing the case for using qualitative outcomes measures: "Qualitative interviews appear to be, at present, the most sensitive method for the evaluation of the harmful effects of therapy and also for recording its greatest successes. The standardized self-report methods used in randomized trials appear both to inhibit criticism of therapists and reporting of deterioration and also give little scope for clients to describe the hugely positive transformational experiences that can sometimes take place in counselling". `This book deeply addresses what it means to do qualitative research into counselling and psychotherapy with plenty for the novice researcher and even more for those already deeply immersed in qualitative research' - William West, *Counselling and Psychotherapy Research Qualitative methods are particularly suited to answering the kinds of questions that counsellors and psychotherapists need to ask about their practice. Qualitative Research in Counselling and Psychotherapy* has therefore been written to help researchers find their way through the range of methodologies and techniques available to them. Leading expert, and bestselling author John McLeod takes the reader through each stage of the research process, explaining techniques for gathering data, writing up the study and evaluating the findings. Each qualitative method is clearly described and critically assessed in terms of its own strengths and weaknesses. Examples from actual research studies are given to show how the methods work in practice. The need to show how and why counselling works has led to an explosion of research activity. For all those involved in research - whether as part of academic study or in practice this book will be essential reading. As an introduction to qualitative methods, this it is certain to be widely recommended on courses in counselling and counselling psychology and will also be of interest to those who provide counselling in other professional areas such as nursing and social work.
