Vistas in Astronomy Feb 26 2022 *Vistas in Astronomy, Volume 1: Co-operation and Organization, History and Philosophy, Dynamics, Theoretical Astrophysics, Instruments, Radio Astronomy, Solar Physics* brings together the ideas that form the structural units of what is known about astronomy. This book is organized into seven sections encompassing 93 chapters. Section I provides a summary of the significant contributions of international cooperation and various astronomy-related organizations in the advancement of astronomy. Section II highlights the historical developments in astronomy, from the early studies of the Egyptians to the formulation of philosophical concepts of cosmology. Sections III and IV describes the dynamic and theoretical aspects of astrophysics. These sections consider research studies on stellar dynamics, atmospheres, and magnetic fields, as well as the formation of condensation in a gaseous nebula. Part V is devoted o the developments in telescope optics and mirrors, spectrographs, electronic calculating machines, and photometers, while Section VI examines the field of radio astronomy. Part VII looks into solar physics related studies, including the structure and movements of sunspots, eclipse observation, and spectroscopic investigations of the solar corona. This book is of great value to astronomers, astrophysicists, solar physicists, and researchers in the allied fields.

Taming the Four Horsemen Aug 23 2021 A powerful polemic on the major threats facing the world today and how they can be overcome. Our world is facing catastrophes of many kinds, from the climate crisis to global outbreaks of deadly diseases. But could we look back at the collapse of previous civilisations to see what lessons might be learned? The explorer and campaigner Robin Hanbury-Tenison believes we urgently need to tackle the four harbingers of catastrophe: The White Horse of Pestilence and Pandemics - many remote tribal societies have lives that are healthier than ours - what can we learn from them? The Red Horse of War - can we avoid conflict through promoting prosperity and renewable energy for all? The Black Horse of Famine - is now the time to use technology we've had since World War II to influence the weather? The Pale Horse of Death - will geoengineering help to undo the appalling pollution we are inflicting on the planet, especially the oceans? The lessons of Taming The Four Horsemen are clear: if we humans are to survive we need to make transformative changes now.

Greater Medieval Houses of England and Wales, 1300-1500: Volume 2, East Anglia, Central England and Wales Aug 03 2022 The second volume of a massive, illustrated survey, the first of its kind for 150 years.

Chinese Adventure - A Ride Along the Great Wall Aug 30 2019 Explorer Robin Hanbury-Tenison rode along the Great Wall of China with his wife. In the course of their journey they saw a China and its people that few foreigners have ever seen.

Biomolecular Sensors Jun 20 2021 The development of devices that incorporate biological assemblies is impacting analytical and biomedical research. Today, scientists can monitor vital biological interactions—such as the binding of DNA to proteins—in real time, deriving unique information necessary to understanding biochemical pathways and thus aiding the design of drugs to regulate

Modern Classical Optics Sep 04 2022 "This book provides accounts of non-quantum optical phenomena and of instruments and technology based on them. While covering the conventional topics such as diffraction, coherence, thin films and holography, the book also extends to the less conventional topics: Gaussian beams and laser cavities (supporting laser physics), etendue, cd readers and confocal microscopes. Even the conventional material is given a fresh presentation, with standard calculations tidied, common errors avoided, and insightful connections made with other parts of physics. Problems offer opportunities for testing the reader's basic understanding, taking a careful route through reasoning, and checking orders of magnitude. In addition, many of the problems contain exploratory and critical material, such as investigating possible alternative approaches, asking searching questions about fundamentals, or solving apparent paradoxes."--BOOK JACKET.

Sustaining Belief Feb 03 2020 This book reconstructs the late Anglo-Saxon history

of the church of Worcester, covering the period between Bishops Waerferth and Wulfstan II. Starting with an examination of the episcopal succession and the relations between bishops and cathedral community, the volume moves on to consider the development of the church of Worcester's landed estate, its extent and its organization. These are analysed in connection with the very significant measures taken in the eleventh century to preserve - and sometimes manipulate - the memory of past land transactions. Of paramount importance among such measures was the production of two cartularies - Liber Wigorniensis and Hemming's cartulary - respectively compiled at the beginning and at the very end of the eleventh century. Last but not least, the volume considers ecclesiastical organization and pastoral care in the diocese of Worcester, by looking at the relations between the cathedral church and the other churches in the diocese. Special attention is given to the payment of church dues and to such aspects of pastoral care as preaching, penance and visitation of the sick. Thanks to the combined analysis of these areas, the book offers a detailed picture of the main occupations (and preoccupations) of the late Anglo-Saxon church of Worcester in its interaction with society at large: from its tenants to its faithful, from the clergy in its diocese to its opponents in land disputes.

Mulu Sep 23 2021 In 1977 Robin Hanbury-Tenison and a team of scientists began a study of this beautiful yet hazardous terrain - a dense virgin forest teeming with exotic new species and home to the nomadic Penan tribe. With its breathtaking network of caves, lush hidden valleys, and spectacular mountain range, Mulu proved to be one of the most valuable regions of natural beauty left in the world. destruction of the surrounding area stands as yet another example of the senseless exploitation of our planet. significance of the rain forests to our fragile ecosystem. It is a timely reminder of our need to preserve them for the future.
