Potato Jun 26 2019 Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. Baked potatoes, Bombay potatoes, pommes frites . . . everyone eats potatoes, but what do they mean? To the United Nations they mean global food security (potatoes are the world's fourth most important food crop). To 18th-century philosophers they promised happiness. Nutritionists warn that too many increase your risk of hypertension. For the poet Seamus Heaney they conjured up both his mother and the 19th-century Irish famine. What stories lie behind the ordinary potato? The potato is entangled with the birth of the liberal state and the idea that individuals, rather than communities, should form the building blocks of society. Potatoes also speak about family, and our quest for communion with the universe. Thinking about potatoes turns out to be a good way of thinking about some of the important tensions in our world. Object Lessons is published in partnership with an essay series in The Atlantic.

The Graves are Walking Jan 14 2021 The Irish famine that began in 1845 was one of the nineteenth century's greatest disasters. By its end, the island's population of eight million had shrunk by a third through starvation, disease and emigration. This is a brilliant, compassionate retelling of that awful story for a new generation - the first account for the general reader for many years and a triumphant example of narrative non-fiction at its best. The immediate cause of the famine was a bacterial infection of the potato crop on which too many the Irish poor depended. What turned a natural disaster into a human disaster was the determination of senior British officials to use relief policy as an instrument of nation-building in their oldest and most recalcitrant colony. Well-meaning civil servants were eager to modernise Irish agriculture and to improve the Irish moral character, which was utterly lacking in the virtues of the new age of triumphant capitalism. The result was a relief programme more concerned with fostering change than of saving lives. This is history that resonates powerfully with our own times.

The Potato Crop May 18 2021 This book is open access under a CC BY 4.0 license. This book provides a fresh, updated and science-based perspective on the current status and prospects of the diverse array of topics related to the potato, and was written by distinguished scientists with hands-on global experience in research aspects related to potato. The potato is the third most important global food crop in terms of consumption. Being the only vegetatively propagated species among the world ' s main five staple crops creates both issues and opportunities for the potato: on the one hand, this constrains the speed of its geographic expansion and its options for international commercialization and distribution when compared with commodity crops such as maize, wheat or rice. On the other, it provides an effective insulation against speculation and unforeseen spikes in commodity prices, since the potato does not represent a good traded on global markets. These two factors highlight the underappreciated and underrated role of the potato as a dependable nutrition security crop, one that can mitigate turmoil in world food supply and demand and political instability in some developing countries. Increasingly, the global role of the potato has expanded from a profitable crop in developing countries to a crop providing income and nutrition security in developing ones. This book will appeal to academics and students of crop sciences, but also policy

makers and other stakeholders involved in the potato and its contribution to humankind ' s food security.

" —The New Yorker The book that helped make Michael Pollan, the New York Times bestselling author of How to Change Your Mind, Cooked and The Omnivore ' s Dilemma, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers ' genes far and wide. In The Botany of Desire, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind ' s most basic yearnings. And just as we ' ve benefited from these plants, we have also done well by them. So who is really domesticating whom?

The Great Irish Potato Famine Sep 21 2021 In the century before the great famine of the late 1840s, the Irish people, and the poor especially, became increasingly dependent on the potato for their food. So when potato blight struck, causing the tubers to rot in the ground, they suffered a grievous loss. Thus began a catastrophe in which approximately one million people lost their lives and many more left Ireland for North America, changing the country forever. During and after this terrible human crisis, the British government was bitterly accused of not averting the disaster or offering enough aid. Some even believed that the Whig government's policies were tantamount to genocide against the Irish population. James Donnelly's account looks closely at the political and social consequences of the great Irish potato famine and explores the way that natural disasters and government responses to them can alter the destiny of nations.
